

Quick Guide To Video Calls

Audio

Clear audio can make or break a stream.

- Find a quiet space/limit outside noises
- If you have ear-buds with a mic, use them
- Sit close to your laptop
- Mute your mic when you're not talking
- Don't type while your mic is open

Environment

A simple space can elevate your video call.

- Avoid high traffic areas in your home
- Keep your background simple: e.g. add flowers, plants, painting
- Make sure to light your face evenly
- Position your biggest light source in front
- Add lights/lamps behind the laptop

Camera

How your audience sees you is paramount.

- Position your laptop camera at eye level
- Center yourself in the frame
- Always remember that your camera is on
- Look at the webcam when you are speaking, not the screen
